PROFESSIONAL SUMMARY

Computer Information Systems (CIS) graduate with hands-on IT support experience and a concentrated focus on end-user technical assistance. Currently completing an IT internship at Steel Technologies, where daily work includes user account management through Microsoft Entra ID and Active Directory, Windows endpoint deployment and troubleshooting, mobile device management (MDM) configuration via Microsoft Intune, and service request resolution through ServiceNow. Actively preparing for CompTIA A+ certification (220-1201 Core 1 in progress, Core 2 preparation underway) and brings a strong ability to communicate technical solutions clearly to users of all experience levels.

TECHNICAL SKILLS

Active Directory & Identity: Microsoft Entra ID / Active Directory (user provisioning, security group management, account creation, access controls, password management)

Endpoint Management: Microsoft Intune (MDM/MAM), Meraki Systems Manager, Tanium, device enrollment, compliance policy enforcement, Intune Autopilot staging

Remote Support: Remote Desktop Protocol (RDP), Microsoft Quick Assist, Windows Remote Management (WinRM)

Hardware & Software: Desktop and laptop configuration, peripheral setup and troubleshooting, hardware diagnostics, application deployment

Service Desk & ITSM: ServiceNow (incident management, Knowledge Base authoring), IT service management (ITSM) practices

Networking Fundamentals: TCP/IP, DNS, DHCP, Virtual Private Network (VPN), LAN/WAN, wireless troubleshooting

Security: Endpoint hardening, multi-factor authentication (MFA), conditional access, CompTIA A+ (220-1201 Core 1 in progress)

Productivity Suite: Microsoft 365, Teams, SharePoint, OneDrive

PROFESSIONAL EXPERIENCE

IT Intern – Steel Technologies, Louisville, KY

Mar 2026 – Present

- Managed user account provisioning and access administration through Microsoft Entra ID and Active Directory, including account creation, security group assignments, license allocation, and access updates during employee onboarding and offboarding cycles.
- Diagnosed and resolved Windows endpoint issues, MDM enrollment failures, and application errors by providing remote desktop assistance via RDP and Microsoft Quick Assist, documenting each resolution in ServiceNow to build a reusable support Knowledge Base.
- Deployed and staged Windows endpoints for new and replacement users via Microsoft Intune Autopilot, configuring applications, enforcing security baseline policies, and confirming device compliance before issuing hardware to staff.
- Participated in a network-wide device audit using Meraki and Tanium, cataloguing configuration states and asset inventory across hundreds of devices, and organizing findings for the senior IT team to act on.
- Authored Knowledge Base articles in ServiceNow documenting step-by-step resolutions for recurring technical issues, reducing repeat escalations and supporting faster first-contact resolution across the team.

Product Flow Specialist – Best Buy, Louisville, KY

Nov 2025 – Present

- Built extensive hands-on familiarity with consumer and enterprise technology hardware—laptops, tablets, networking equipment, smart home devices, and mobile accessories—through daily inventory management in a retail technology environment.

- Coordinated with sales floor and receiving teams to fulfill product staging requests on tight timelines, developing the cross-functional communication and follow-through precision that directly transfers to a service desk environment.
- Consistently maintained top-tier accuracy and efficiency rankings across store operational metrics, demonstrating the process discipline and reliability expected in an IT support function.

PROJECTS

IT Infrastructure Assessment – Floyd County Animal Rescue League (FCARL) Spring 2026

- Conducted a 20-page IT infrastructure and security posture assessment for a local nonprofit, documenting hardware inventory, network configuration, endpoint security gaps, and user access control weaknesses, alongside a prioritized remediation plan.
- Translated all technical findings into a clear, accessible report for non-technical organizational leadership, reinforcing the ability to bridge technical depth with plain-language communication—a core help desk competency.

System Architecture & Web Deployment – The Hope Buss Spring 2026

- Served as the primary technical contact for a nonprofit website overhaul using Wix Studio, gathering client requirements, managing content migration, and coordinating deployment to deliver a functional, maintainable solution on schedule.

GuideBook Pro Academic Team Project

- Contributed to core application development and end-user documentation for a team-built project, focusing on usability testing, issue documentation, and writing user-facing help content to support a smooth experience for non-technical users.

SQL AI Agent Portfolio Project

- Developed a self-directed technical project automating SQL query generation via AI, demonstrating independent problem-solving initiative beyond classroom coursework.

EDUCATION

University of Louisville, College of Business	Louisville, KY
Bachelor of Science in Computer Information Systems (CIS)	May 2026
Concentrations: Cybersecurity and Data Analytics
